## IN THE CLAIMS

## Claim listing:

- 1. (Original) A thermoplastic composition comprising a matrix of a polycarbonate polymer in which are embedded polysiloxane domains with an average domain size between 20 and 45 nanometers.
- 2. (Original) The composition of claim 1 comprising a mixture at least one polycarbonate/poly(diorganosiloxane) copolymer.
- (Original) The composition of claim 1 with polysiloxane chains having an average molecular chain length of greater than or equal to about ten siloxane units.
- 4. (Original) The composition of claim 1 with a polydimethyl siloxane content of 1-15 percent by weight or a corresponding molar content of another polydiorgano siloxane calculated with respect to the total weight of the composition.
- 5. (Previously Presented) A thermoplastic composition comprising a matrix of a polycarbonate polymer in which are embedded polysiloxane domains with an average domain size between 20 and 45 nanometers; and
  - a visual effects additive.
- (Original) The composition of claim 5 wherein the visual effects additive is encapsulated in a thermoplastic or thermoset encapsulant.
- 7. (Original) The composition of claim 5 wherein the visual effects additive is at least one metallic flake or colorant, or combinations thereof.
- 8. (Original) The composition of claim 7 wherein the metallic flake has a high aspect ratio.
- 9. (Original) The composition of claim 8 wherein the metallic flake is an aluminum flake.

10/783,140 -3 - 133113-2

- 10. (Previously Presented) A thermoplastic composition comprising a matrix of a polycarbonate polymer in which are embedded polysiloxane domains with an average domain size between 20 and 45 nanometers; and
- a polycarbonate resin, an anti-drip agent, a flame retardant, a styrene acrylonitrile polymer, a cycloaliphatic polyester, an impact modifier, or an ABS rubber, or combinations thereof.
- 11. (Original) A thermoplastic composition comprising a first polycarbonate/poly(diorganosiloxane) copolymer having a first light transmittance and a first haze and a second polycarbonate/poly(diorganosiloxane) copolymer having a second light transmittance and a second haze, wherein the first haze and the second haze have an absolute difference of at least about 50 and/or wherein the first light transmittance and the second light transmittance have an absolute difference of at least about 10 %.
- 12. (Previously Presented) A thermoplastic composition comprising a first polycarbonate/poly(diorganosiloxane) copolymer having a first light transmittance and a first haze and a second polycarbonate/poly(diorganosiloxane) copolymer having a second light transmittance and a second haze, wherein the first haze and the second haze have an absolute difference of at least about 50 and/or wherein the first light transmittance and the second light transmittance have an absolute difference of at least about 10 %; and further comprising a visual effects additive.
- 13. (Original) The composition of claim 12 wherein the visual effects additive is encapsulated in a thermoplastic or thermoset encapsulant.
- 14. (Original) The composition of claim 12 wherein the visual effects additive is at least one metallic flake or colorant, or combinations thereof.
- 15. (Original) The composition of claim 14 wherein the metallic flake has a high aspect ratio.
- 16. (Original) The composition of claim 15 wherein the metallic flake is an aluminum flake.

- 4 - 133113**-**2

- 17. (Original) The composition of claim 11 further comprising a polycarbonate resin, an anti-drip agent, a flame retardant, a styrene acrylonitrile polymer, a cycloaliphatic polyester, an impact modifier, or an ABS rubber, or combinations thereof.
- 18. (Original) A thermoplastic composition comprising a first polycarbonate/poly(diorganosiloxane) copolymer having a first light transmittance of 0 to about 55% and a first haze from about 45 to about 104 and a second polycarbonate/poly(diorganosiloxane) copolymer having a second light transmittance of about 55 to about 100% and a second haze of 0 to about 45 wherein the first haze does not equal the second haze and/or wherein the first light transmittance does not equal the second light transmittance.
- 19. (Original) The composition of claim 18 further comprising a visual effects additive.
- 20. (Original) The composition of claim 19 wherein the visual effects additive is encapsulated in a thermoplastic or thermoset encapsulant.
- 21. (Original) The composition of claim 19 wherein the visual effects additive is at least one metallic flake or colorant, or combinations thereof.
- 22. (Original) The composition of claim 21 wherein the metallic flake has a high aspect ratio.
- 23. (Original) The composition of claim 22 wherein the metallic flake is an aluminum flake.
- 24. (Original) The composition of claim 18 further comprising a polycarbonate resin, an anti-drip agent, a flame retardant, a styrene acrylonitrile polymer, a cycloaliphatic polyester, an impact modifier, or an ABS rubber, or combinations thereof.
  - 25. (Original) An article comprising the composition of claim 1.
- 26. (Previously Presented) A method of obtaining a desired degree of translucency in a thermoplastic composition comprises combining in specific relative quantities a first polycarbonate/poly(diorganosiloxane copolymer) having a first light transmittance and a first haze with a second polycarbonate/poly(diorganosiloxane) copolymer having a
